

# HIMOINSA LAUNCHES THE NEW FAMILY APOLO 4000

The new lighting tower guarantees autonomy of 60 hours

HIMOINSA, a global leading multinational company in manufacturing generating sets, launches to the market its new family of lighting towers Apolo 4000 that reduces the costs and guarantee operating during 60 hours continuously.

The Apolo 4000 stands out for its innovative design, its functionality and its responds to the strict standards of security, portability, maintenance and versatility.

The new lighting tower acquires dimensions of 4,34 x 1,89 x 1,45 metres and 834 kilograms which make it perfect for any application in the construction, pleasure, events, civil defence, emergency and firemen among others.

The new incorporation of HIMOINSA to its lighting towers family is designed for its use during any activity that takes place at night or in any situation with limited natural lighting. Its mast of 9 metres high with spotlights of 4000W offers a capacity of lighting of 30.000m<sup>2</sup>, five times a football field.

The metallic halogenated lamps that include this lighting tower guarantee a broad spectrum of chromatic emission, an enormous efficiency and an optimum lighting. The Apolo 4000 incorporates a Yanmar engine of a whole range of features and of low petrol consumption, guaranteeing autonomy of 60 hours without refuelling. Due to its features, the lighting tower is perfect to be used in emergency situations.
